

PRESS RELEASE

CumuloLogic Announces Java Platform-as-a-Service for HP Cloud Services

Global 2000 enterprises can now accelerate cloud adoption by evaluating the development and deployment of Java applications on HP's public cloud.

Cupertino, Calif. – Sept. 4, 2012 – CumuloLogic, the leading innovator in cloud platform technologies, today announced immediate availability of CumuloLogic PaaS for HP Cloud Services (<http://hpcloud.com>). In addition, HP Cloud Services customers will be able to test drive the CumuloLogic sandbox for 30 days free of charge.

Enterprises are evaluating clouds and platforms to understand how the cloud model fits their business requirements. With this sandbox, customers have an immediate opportunity to evaluate a cloud platform for development, migration and deployment of Java applications for 30 days at zero cost and obligation. The CumuloLogic platform will allow Java developers to quickly create a new application and deploy it with a single-click on HP Cloud Services. In addition, enterprises will be able to test the feasibility of using HP's public cloud with the CumuloLogic platform for development and QA environments.

"Organizations that are looking for an enterprise-class public cloud for new application development and for migrating existing applications can now access HP's public cloud infrastructure with the CumuloLogic PaaS. CumuloLogic with HP Cloud Services deliver the features and performance required by enterprise developers to develop and scale cloud-based applications," said CumuloLogic President and CEO Mike Soby.

"As a longtime HP customer and close follower of cloud technologies, the CumuloLogic sandbox with HP Cloud Services appears to be a great option as a full-Java development platform," said Paul Orleman, Director of Enterprise Governance at Sabre Holdings. "This offering should be appealing to any enterprise that's looking to accelerate cloud adoption while still governing cloud usage."

CumuloLogic's platform provides support for new and existing applications, and can be deployed on both private and public clouds, enabling a clear path toward a seamless hybrid cloud model.

Special Offer

For a limited time, CumuloLogic is offering HP Cloud Services customers a sandbox free of charge for 30 days. Developers can request a free account at cumuloLogic.com/hpcs.

At the end of the evaluation period, enterprises will be able to continue to use a dedicated CumuloLogic PaaS on HP Cloud Services for the low price of \$200 per developer, per month. CumuloLogic will also offer partner-enabled services for onboarding and supporting customers.
