

## **CumuloLogic Announces Availability of No Charge License for Accredited Educational Institutions**

Today CumuloLogic is making available its complete PaaS platform at no cost to the academic community.

**Cupertino, Calif. – March 19, 2012**– CumuloLogic, a Java Platform-as-a-Service (PaaS) software provider, today announced that it will offer a fully functional software license to accredited universities and academic institutions at no cost. PaaS is the fastest growing segment in cloud computing as it greatly simplifies application development and deployment on the cloud.

“Software technology innovation often originates within academic research projects, and by making CumuloLogic PaaS accessible to universities, CumuloLogic is making an important contribution to accelerate cloud adoption. I believe that investing in education is fundamental to advance individual skills and the growth of communities,” stated Scott McNealy, WayIn Chairman and Founder of Curriki.org, a non-profit, educational community.

“ It is critical for academic institutions to access the most cutting-edge technologies now that research and education depend so heavily on digital infrastructure. In addition to fostering new research ideas, cloud computing in general, and PaaS in particular, is sure to play a pivotal role in advancing the 'enterprise' of education,” added Dr. Rich Wolski, Professor of Computer Science, University of California, Santa Barbara, and Chief Technology Officer, Eucalyptus Systems.

“We are very excited to make our innovative PaaS solution available to the broader academic community,” noted Michael Soby, President of CumuloLogic. “The academic world will play a critical role in the continued expansion of cloud innovation and we’re looking forward to working closely with the dozens of universities that participated in our beta program, as well as those that would like to going forward.”

CumuloLogic’s full-feature PaaS software is integrated with Eucalyptus, Citrix CloudStack, OpenStack, and VMware vSphere virtual environment, and Amazon EC2, enabling universities to transform their IT infrastructure to next generation cloud platforms, greatly simplifying and automating the development and deployment of cloud-based applications.

Teaching staff and students will be able to access a free cloud platform to advance cloud computing skills.

Accredited institutions can download the software directly from the CumuloLogic web site at [www.cumuloLogic.com/edu](http://www.cumuloLogic.com/edu).
